Education

B.E. Computer Engineering
Saraswati College of Engineering, Navi Mumbai

2022 – 2026
CGPA: 8.91

Experience

Intern — Full Stack Developer & Frontend Developer
Vortex Web Technologies, Nerul

Jan – Apr 2026

- Developed the frontend of a healthcare consultation platform with responsive user interfaces and integrated MySQL-based data handling for efficient patient and consultation management.
- Built and optimized the frontend of an agriculture marketplace platform, creating responsive and mobile-friendly interfaces for farmers, buyers, and transporters to manage product workflows.
- Designed and implemented mobile-responsive UI components using React and modern frontend practices to improve usability, accessibility, and cross-device user experience across web applications.

Projects

FakeXpose — Multimodal Deepfake Detection System

Python, TensorFlow, FastAPI, OpenCV

- Contributed to the development of a multimodal deepfake detection system using EfficientNet and ensemble learning techniques for video and audio classification.
- Implemented frame extraction, face detection, and preprocessing pipelines using OpenCV and MediaPipe to support video analysis and improve detection performance.
- Developed and integrated an audio feature extraction pipeline with machine learning classifiers for deepfake audio classification and model evaluation.

SIGRO — AI-Powered Smart Agriculture Assistant

React.js, Node.js, Python, YOLOv8

- Integrated and supported a YOLOv8-based plant disease detection module within the application workflow for crop analysis and prediction features.
- Worked on implementing frontend components for displaying crop, soil, and weather-based recommendations within the agricultural platform.
- Developed responsive, mobile-friendly, and multilingual dashboard interfaces with analytics, monitoring, and interactive features for agricultural management applications.

MONEY-MITRA — AI Financial Management Platform

MERN Stack, JWT, Chart.js

- Built a secure AI-driven financial management platform for expense tracking, budgeting, and savings management through an interactive dashboard.
- Implemented JWT authentication, RBAC, and intelligent financial scoring modules to improve platform security and personalization.
- Developed analytics and visualization modules using Chart.js for AI-generated spending insights and predictive budgeting recommendations.

Technical Skills

Languages:	Java, JavaScript, Python
Web Technologies:	MERN Stack, HTML, CSS, Tailwind CSS, React.js
Tools & Platforms:	Git, GitHub, Docker, Vercel, Vite
AI/ML:	Deep Learning, LLMs, Chatbots

Achievements

Hackathons: Secured 1st Prize in Software Category at Avishkar 2026.
Secured 2nd Runner-Up at Loop Hackathon among 2500+ participating teams.

Events: Participated in CodeCrafters 2.0, Mumbai-Hacks, Quasor 2.0, and Hack4 Innovations.

Training: CNC Web World — Full Stack Development Training.
